
[Performance] Retrouver les FK sans indexes

Posté par ChrYStophe - 05-03-2008 à 17:19

Il faut des indexes, normalement, sur toutes les contraintes FK.

Voici la requête qui aide à déterminer où il manque des indexes

```
select distinct acc.OWNER,
acc.CONSTRAINT_NAME,
acc.COLUMN_NAME,
acc.POSITION,
'No Index' Problem
from dba_cons_columns acc,
dba_constraints ac
where ac.CONSTRAINT_NAME = acc.CONSTRAINT_NAME
and ac.CONSTRAINT_TYPE = 'R'
and acc.OWNER = 'SCOTT'
and not exists (
select 'TRUE'
from dba_ind_columns b
where b.TABLE_OWNER = acc.OWNER
and b.TABLE_NAME = acc.TABLE_NAME
and b.COLUMN_NAME = acc.COLUMN_NAME
and b.COLUMN_POSITION = acc.POSITION)
order by acc.OWNER, acc.CONSTRAINT_NAME, acc.COLUMN_NAME, acc.POSITION
```
